

F117 Nighthawk

For this model you will need wood glue and a thin brush (roughly 1/8" in width)

1. Place the bottom plate with the labels facing up

2. Glue and insert the connector pieces as shown, matching the letters of the pieces to the bottom plate. The letter on every piece should be visible if you look from the front of the model.

3. Attach and glue each outer piece to the connector pieces, matching the letters. To hide the letters, flip the piece over and place on the opposite side.
