

Diagram

For this model wood glue and a very fine brush is recommended (roughly 1/8" thick)

1. Assemble box shown, applying a small amount of glue on the interior points where the box joins. DO NOT attach lid

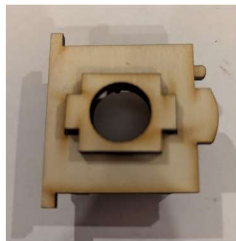

2. Glue and stack piece #10 and both pieces #8, ensuring that the opening is aligned. If need be, use piece #14 and make sure it passes all the way through all 3 pieces. Then remove piece #14 and let dry 2-3 minutes

3. PLACE both pieces #11 on top of piece #4, DO NOT GLUE these pieces should move freely

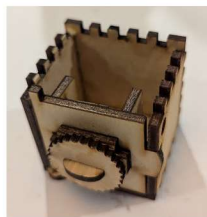

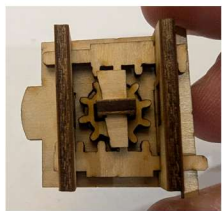

4. Glue and attach both pieces #9 to piece #4 as shown. These pieces will align opposite one another. L Let dry 2-3 minutes

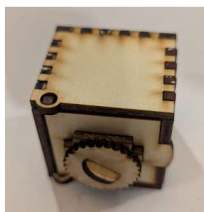

5. Flip the pieces from step 4 and glue piece #7 to piece #4

6. Place the gear piece from step 2 into the door from steps 4 and 5. The opening should look horizontal and the pins should be retracted as shown

7. Insert piece #14 through piece #12, then insert through the door. Flip dor and insert piece #13 through the gap in piece #14 on the back side of the door. Place door into the box in step 1.

8. Attach piece #1 to the top of the box, applying glue on the interior points a long the side and back of the box. Enjoy!
